

F-Secure Radar

F-Secure Radar is a broadcast system that delivers instant notifications around the world through a variety of media. F-Secure Radar broadcasts information about virus attacks, denial of service and other critical security issue alerts to a wide range of devices, including mobile phones, PDAs and pagers. This ensures that messages are delivered to you wherever you are.

Getting the Right Information

The experts in our team work round the clock to investigate suspicious code. When potential threats are discovered, such as virus outbreaks or denial of service attacks, time is of the essence. With F-Secure Radar, our experts make sure the most critical security alerts get to you immediately, providing the time-critical information you need to do your job. You choose the combination of alert level and delivery device.

To You, Not Your Mailbox

During past security crises, like LoveLetter and Melissa, millions of dollars were lost because the notification did not reach key individuals in time. F-Secure Radar solves this problem by pushing alerts to you using all the methods you prefer. F-Secure Radar can deliver alerts to pagers, mobile phones, PDAs, email, phones and faxes, making sure you get the message no matter where you are.

Alerts sent to a wide variety of devices: phones, emails, mobile phones, pagers, faxes, and PDAs

Priority filtering for critical security alerts

Easy to understand alert categorization

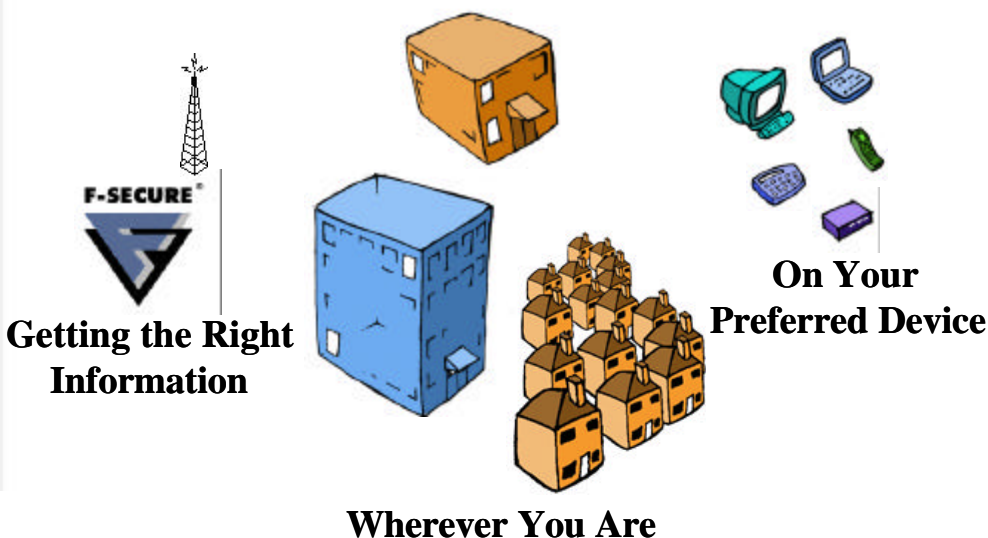

Yearly subscription covers all alerts, all year

Configure different level alerts to be delivered to different locations.

Example: Send all Level One Alerts to my pager, and send all Level Two Alerts to my email, mobile phone, and pager
End-user configurable over Internet with web-based interface

Important security alerts including virus outbreaks and denial of service attacks

F-Secure features the world's best Security Information Center, operating 24-hours a day, handling new and emerging threats

F-Secure Corporation

Security Alert Classification

F-Secure prioritizes the security alerts into two classes: Level 1 and Level 2. Users choose which classification they wish to receive, and on which devices they wish to receive each level alert.

Level 1

This is a high level alert! F-Secure issues Level 1 alerts when the security risk is substantial. This includes viruses, worms, and/or denial of service attacks that have the ability to spread quickly and become widespread with the ability to inflict major damage to systems. Historically, F-Secure has issued an average of one Level 1 security alert each month.

Level 2

This is a medium level alert. F-Secure issues Level 2 alerts when there is a potentially substantial security risk, or the threat is unique in some way. This would include viruses, worms, and/or denial of service attacks that may not spread as rapidly as a Level 1 security alert, but may inflict damage due to their unique nature. An example might be a particularly harmful virus that is not in the wild, or the first-ever instance of a virus for a wireless device. Historically, F-Secure has issued an average of one Level 2 security alert each week.

F-Secure Security Team

Our team of dedicated researchers is on call 24-hours a day responding to new and emerging threats. In fact, only F-Secure releases tested virus definition updates daily, to make sure our customers are receiving the highest quality service and protection. Our products consistently earn the highest ratings in detection of malicious code, data encryption and protection of system integrity. Now, users can leverage this expertise and obtain instant notifications to security outbreaks by subscribing to F-Secure Radar.

COMPANY AWARDS

F-Secure Named by Time Magazine as One of the Top 50 European Technology Firms (Time Magazine, June 2000)

F-Secure Granted Technology Pioneer Award (World Economic Forum, February 2000)

F-Secure Anti-Virus Achieves Highest Detection and Disinfection Rates (CHIP Magazine, May 2000)

F-Secure Anti-Virus Receives Checkmark Levels 1 and 2 (West Coast Labs Checkmark Certification, September 2000)

F-Secure Workstation Suite 4.0 Gets 5/5 "...seamlessly integrated, centralized control of the network, 5/5 overall rating" (Secure Computing - July 1999)
